

SCHOOL OF COMPUTER SCIENCE AND ARTIFICIAL INTELLIGENCE			DEPARTMENT OF COMPUTER SCIENCE ENGINEERING	
Program Name: B. Tech		Assignment Type: Lab		Academic Year:2025-2026
Course Coordinator Name		Venkataramana Veeramsetty		
Instructor(s) Name		Dr. V. Venkataramana (Co-ordinator)		
		Dr. T. Sampath Kumar		
		Dr. Pramoda Patro		
		Dr. Brij Kishor Tiwari		
		Dr.J.Ravichander		
		Dr. Mohammand Ali Shaik		
		Dr. Anirodh Kumar		
		Mr. S.Naresh Kumar		
		Dr. RAJESH VELPULA		
		Mr. Kundhan Kumar		
		Ms. Ch.Rajitha		
		Mr. M Prakash		
		Mr. B.Raju		
		Intern 1 (Dharma teja)		
		Intern 2 (Sai Prasad)		
		Intern 3 (Sowmya)		
		NS_2 (Mounika)		
Course Code	24CS002PC215	Course Title	AI Assisted Coding	
Year/Sem	II/I	Regulation	R24	
Date and Day of Assignment	Week5 - Thursday	Time(s)		
Duration	2 Hours	Applicable to Batches		
AssignmentNumber:10.4(Present assignment number)/24(Total number of assignments)				
Q.No.	Question			Expected Time to complete
1	Lab 10 – Code Review and Quality: Using AI to Improve Code Quality and Readability Lab Objectives <ul style="list-style-type: none">• Use AI for automated code review and quality enhancement.• Identify and fix syntax, logical, performance, and security issues in Python code.• Improve readability and maintainability through structured refactoring and comments.			Week5 - Thursday

- Apply prompt engineering for targeted improvements.
- Evaluate AI-generated suggestions against PEP 8 standards and software engineering best practices

Task 1: Syntax and Error Detection

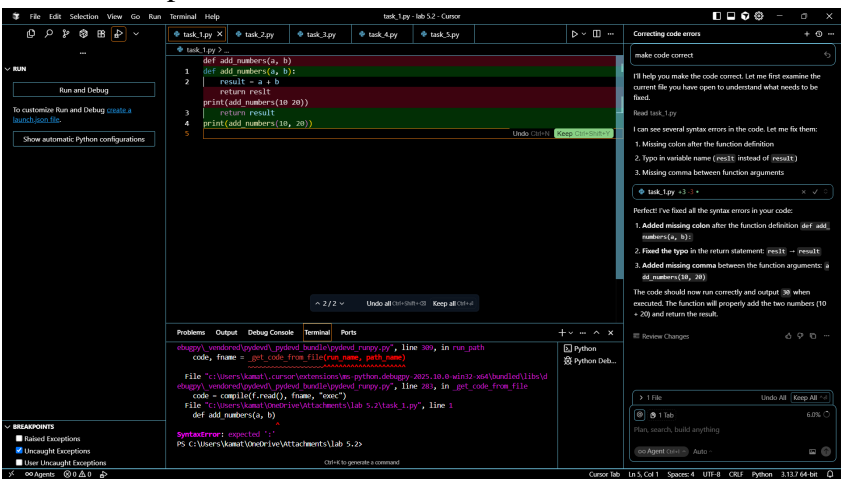

Task: Identify and fix syntax, indentation, and variable errors in the given script.

buggy_code_task1.py

```
def add_numbers(a, b)
    result = a + b
    return reslt
print(add_numbers(10 20))
```

Expected Output:

- Corrected code with proper syntax (: after function, fixed variable name, corrected function call).
- AI should explain what was fixed.

Task 2: Logical and Performance Issue Review

Task: Optimize inefficient logic while keeping the result correct.

buggy_code_task2.py

```
def find_duplicates(nums):
    duplicates = []
    for i in range(len(nums)):
        for j in range(len(nums)):
            if i != j and nums[i] == nums[j] and nums[i] not in duplicates:
                duplicates.append(nums[i])
    return duplicates
numbers = [1,2,3,2,4,5,1,6,1,2]
print(find_duplicates(numbers))
```

Expected Output:

- More efficient duplicate detection (e.g., using sets).
- AI should explain the optimization.

```
task_1.py > ...
1 def find_duplicates(nums):
2     duplicates = set()
3     seen = set()
4     for num in nums:
5         if num in seen:
6             duplicates.add(num)
7         else:
8             seen.add(num)
9     return list(duplicates)
10 numbers = [1,2,3,2,4,5,1,6,1,2]
11 print(find_duplicates(numbers))
12
```

Problems Output Debug Console Terminal Ports

```
.\cursor\extensions\ms-python.debugpy-2025.10.0-win32-x64\bundled\libs\debugpy\launcher' '5602
9' '--' 'C:\Users\kamat\OneDrive\Attachments\lab 5.2\task_1.py'
[1, 2]
PS C:\Users\kamat\OneDrive\Attachments\lab 5.2> ^C
PS C:\Users\kamat\OneDrive\Attachments\lab 5.2>
PS C:\Users\kamat\OneDrive\Attachments\lab 5.2> c:: cd 'c:\Users\kamat\OneDrive\Attachments\l
ab 5.2'; & 'c:\Users\kamat\AppData\Local\Programs\Python\Python313\python.exe' 'c:\Users\kamat
.\cursor\extensions\ms-python.debugpy-2025.10.0-win32-x64\bundled\libs\debugpy\launcher' '5683
7' '--' 'C:\Users\kamat\OneDrive\Attachments\lab 5.2\task_1.py'
[1, 2]
PS C:\Users\kamat\OneDrive\Attachments\lab 5.2>
```

Ctrl+K to generate a command

Task 3: Code Refactoring for Readability

Task: Refactor messy code into clean, PEP 8–compliant, well-structured code.

```
# buggy_code_task3.py
```

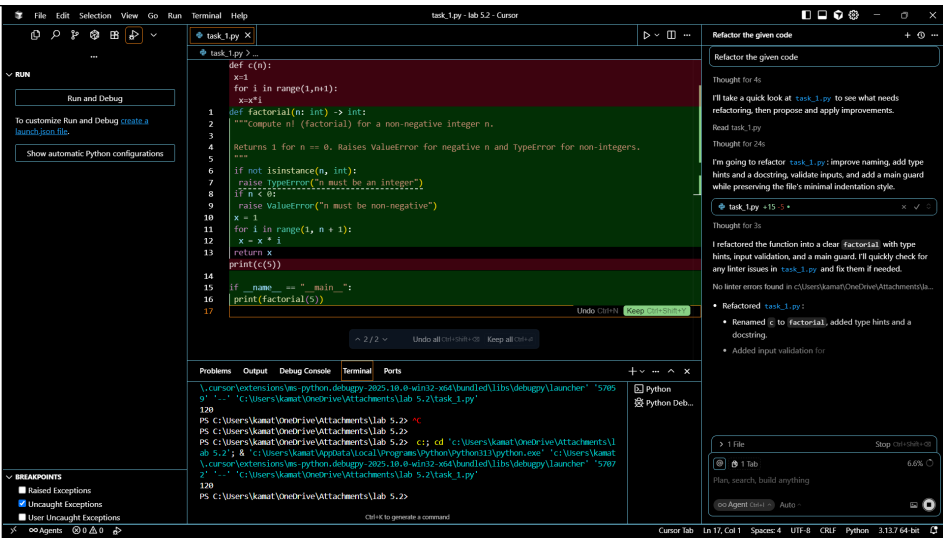

```
def c(n):
    x=1
    for i in range(1,n+1):
        x=x*i
    return x
print(c(5))
```

Expected Output:

Function renamed to calculate_factorial.

Proper indentation, variable naming, docstrings, and formatting.

AI should provide a more readable version.

Task 4: Security and Error Handling Enhancement

Task: Add security practices and exception handling to the code.

```
# buggy_code_task4.py

import sqlite3

def get_user_data(user_id):

    conn = sqlite3.connect("users.db")

    cursor = conn.cursor()

    query = f"SELECT * FROM users WHERE id = {user_id};" #
```

Potential SQL injection risk

```
cursor.execute(query)

result = cursor.fetchall()

conn.close()

return result
```

```
user_input = input("Enter user ID: ")
```

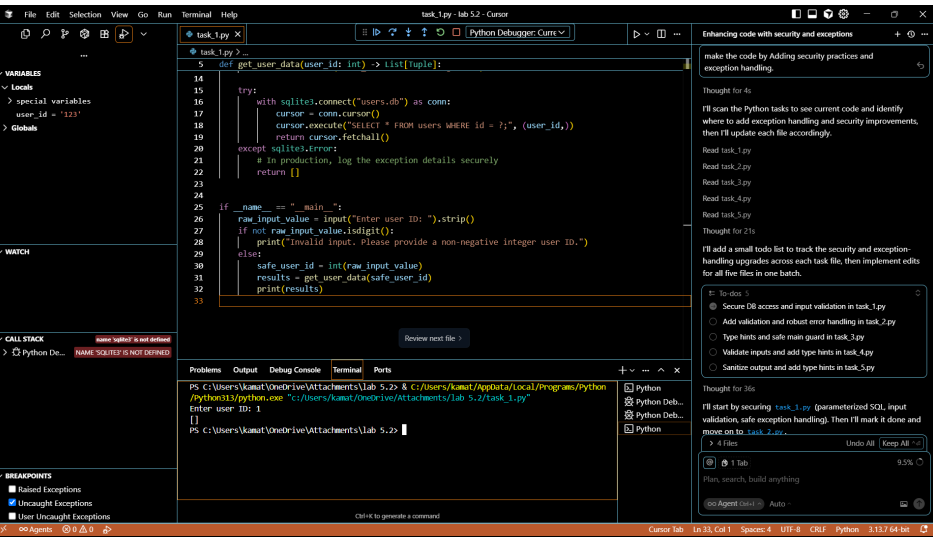

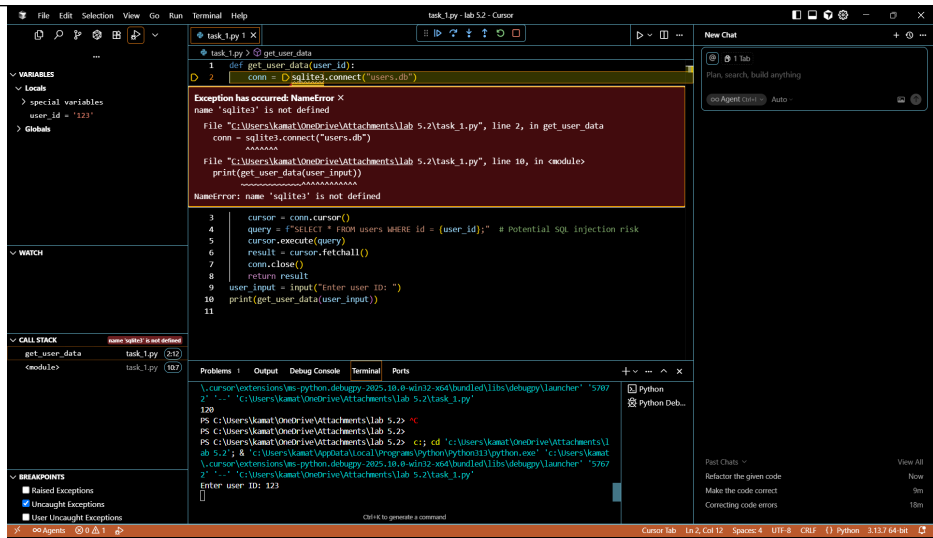

```
print(get_user_data(user_input))
```

Expected Output:

Safe query using parameterized SQL (? placeholders).

Try-except block for database errors.

Input validation before query execution.

Task 5: Automated Code Review Report Generation

Task: Generate a **review report** for this messy code.

buggy_code_task5.py

```
def calc(x,y,z):
    if z=="add":
        return x+y
    elif z=="sub": return x-y
    elif z=="mul":
        return x*y
    elif z=="div":
        return x/y
```

```
else: print("wrong")

print(calc(10,5,"add"))
print(calc(10,0,"div"))
```

Expected Output:

AI-generated **review report** should mention:

- Missing docstrings
- Inconsistent formatting (indentation, inline return)
- Missing error handling for division by zero
- Non-descriptive function/variable names
- Suggestions for readability and PEP 8 compliance
